**36-206, MICROECONOMIC PRINCIPLES**  
**FALL 2013**

**INSTRUCTOR:** M. Kevin McGee  
**OFFICE PHONE:** 424-7155  
**OFFICE:** Sage 2418  
**OFFICE HOURS:** MWF 12:40-1:40  
**EMAIL:** mcgee@uwosh.edu  
**TEXT:** Hubbard & O’Brian, Microeconomics

**COURSE PREREQUISITES:** A grade of "C" or better in 67-104,-108, -204, or 67-171; or qualification to enroll in 67-171 via Math Placement Test.

**Grading:**
Your course grade will be based on a curve, using total points earned. Four (4) tests will be given, together accounting for roughly 65-70% of your grade. They will be comprised of both multiple choice problems, and graphing problems. *The Final exam will be comprehensive.* Tentative dates are:

- Midterm 1: Friday, Oct 4
- Midterm 2: Friday, Nov 1
- Midterm 3: Friday, Nov 22
- Final Exam: Friday, Dec 13

No make-up midterms will be given. If you miss a midterm, your grade for that test will be based upon your score on the final exam. If you take all the midterms, and score higher on the final exam than on the average of the three midterms, your final will be weighted one half heavier in computing your final grade.

The remaining portion of your grade will be based on attendance, on the pre- and post-tests, and on a variety of take home assignments that will be given to you throughout the semester. For attendance, only officially University approved absences will be excused, and *only if the excused student attends both the immediately preceding and following classes at which attendance is taken.*

All assignments will be handed out at the end of class, due the following class period; late assignments will be accepted only if turned in to my office within 24 hours of their being due.

**Pre- and Post-tests**
A 20 question pretest and a 20 question post-test will be administered through D2L. Taking the pretest is worth 5 points; your score above 10 on the post-test will added to your other course points. The tests are listed under "Ongoing" in D2L; the pretest will be available during the first week of classes; the post-test during the last week of classes.
Chapter 1

- Define scarcity.
- Identify the factors of production: land, labor, capital.
- Define opportunity cost.
- Choose an optimal allocation, using marginal analysis.
- Describe the concept of efficiency.
- Distinguish between normative and positive statements.

Chapter 2

- Graph the production possibilities for an individual.
- Graph the production possibilities for a group.
- Determine opportunity costs, comparative advantage, and terms of trade.
- Distinguish between constant opportunity cost tradeoffs, and increasing opportunity cost tradeoffs.

Chapter 3

- State the Law of Demand
- Identify income and substitution effects of a price change.
- Distinguish between \( \Delta \text{Demand} \) and \( \Delta \text{Quantity demanded} \).
- Identify conditions for a competitive market.
- Distinguish between the short run and long run.
- Define the Law of Diminishing Returns.
- Calculate MPL, MC.
- Locate firm, industry SR supply curves
- Distinguish between \( \Delta S \) and \( \Delta \text{Quantity supplied} \).
- Locate the market equilibrium.
- Describe the market response to any exogenous change.

Chapter 6

- Measure price, income, and cross price elasticities.
- Interpret price, income, and cross price elasticities.
Objectives: 206 Midterm 2

Chapter 3
• Distinguish between \( \Delta \text{Demand} \) and \( \Delta \text{Quantity demanded} \).
• Distinguish between \( \Delta S \) and \( \Delta \text{Quantity supplied} \).
• Locate the market equilibrium.
• Describe the market response to any exogenous change.

Chapter 6
• Measure price, income, and cross price elasticities.
• Interpret price, income, and cross price elasticities.

Chapter 4
• Determine the effects of price ceilings and floors.
• Determine the incidence of an excise tax.
• Describe the concept of efficiency.
• Explain why the competitive market equilibrium quantity is the efficient quantity
• Identify why taxation creates inefficiency; measure Welfare Loss.

Chapter 8
• Locate the equilibrium price, when two countries can trade a product.
• Measure the quantity each country would import or export at that price.
• Define "arbitrage".
• Identify and measure the net surplus gained from trade.
• Identify who gains and loses from trade.
• Determine the effects of a tariff on trade; measure the lost net surplus; identify the winners and losers.
• Determine the effects of a quota on trade; measure the lost net surplus; identify the winners and losers.

Chapter 16
• Calculate VMPL; choose optimal L.
• Distinguish between firm, industry, and economy demand for labor.
• Identify income and substitution effects of a wage rate change.
• Distinguish between firm, industry, and economy supply of labor.
• Define economic rent.
• Locate the various labor market equilibria.
• Describe the labor market responses to any exogenous change.
Objectives: 206 Midterm 3

Chapter 7
- Identify all the economic costs of production.
- Distinguish economic costs from accounting costs.
- Measure the annual cost of capital: interest costs and depreciation.
- Calculate the present value of some future amount of income.
- Given purchase price and future revenue, estimate the rate of return on an investment.

Chapter 10
- Measure ATC, AVC, MC.
- Graph ATC, AVC, MC.
- Calculate economic profit.
- Describe the sources of economies or diseconomies of scale.
- Distinguish between diseconomies of scale and diminishing returns.

Chapter 11
- Identify conditions for a competitive market.
- Locate the shut down point.
- Determine the profit maximizing quantity for a competitive firm.
- Measure profit numerically.
- Measure profit graphically.
- Locate the break even price.
- Determine the SR market equilibrium P and Q.
- Determine firm output at the SR equilibrium P.
- Identify whether entry or exit would occur in the LR.
- Distinguish between Constant cost and Increasing cost industries.
- Describe the LR Supply curve in either a constant cost or increasing cost industry.
- Locate the LR equilibrium in a constant cost industry.
Objectives: 206 Final

Note: Since the Final exam is comprehensive, all the objectives for the previous Chapters 1 - 4, 6 - 8, 10, 11, and 16, handed out before the three Midterm exams, apply to the Final exam as well.

Chapter 14
• Calculate a Monopolist's Marginal Revenue.
• Graph a Monopolist's Marginal Revenue curve.
• Locate the profit maximizing Monopoly P and Q, at MR=MC.
• Calculate and graph Monopoly profit.
• Describe why Monopoly is inefficient.
• Calculate and graph the efficiency loss due to Monopoly.
• Describe why Marginal Cost pricing is not feasible for a Natural Monopoly.
• Describe the advantages and disadvantages of Average Cost pricing for a regulated Natural Monopoly.

Chapter 15
• Describe the pricing pattern of a price discriminating Monopolist.
• Explain how price elasticity affects price discrimination.

Chapter 12
• Describe how Monopolistic Competitive firms behave like Monopolies.
• Describe how Monopolistic Competitive industries behave like Competitive Industries.

Chapter 13
• Describe what is meant by "Strategic Behavior" in Oligopoly.
• Explain why cartels are unstable.
