

Letters of inquiry have become so numerous, that the Council of this institution have directed me to publish a circular giving to the public such information of our institution, our location, and country, as they seem desirous to obtain. Our location is midway between Green and Fresh Lakes in a beautiful valley of 300 Acres, to the side of which glides a crystal stream of sufficient volume and fall to serve all the hydraulic power which may be needed by an extensive association. It is the product of springs of constant issue, consequently the stream varies but little in volume, thro' the year. By means of a cheap race three falls may be obtained, one of 12, one 15, and one of 25 feet, creating a power of sufficient force to propel 12 run of stone. The Phalanx have about 2000 acres including the School-land (leased.) 100 acres sowed to wheat last summer; a saw mill and frame houses to the aggregate of 32 by 300 feet; six horses, 26 oxen, 20 cows, and 100 sheep, and have made such arrangements as to increase their stock of oxen and cows to 130 this spring. There is now on the Domain 50 laboring men, total, including women and children 111, and a number of additional families will become residents this spring. A resident Physician is on his way from Cleveland, Ohio.

We have now 300 acres under fence, and are now rapidly progressing with the spring work, and are preparing to put in 600 acres of wheat the present season. In our family arrangements, we adopt the general system proposed by Charles Fourier, having altered and amended it so as to adapt it to American feelings and American habits, family independence, care of children, and modes of living.

In matters of religion, Methodists, Presbyterians, Baptists, Episcopalians and Universalists, blend in one common union, and worship at one common altar.

We have no power to contract debts in our corporate name, consequently the incorporation is free from debt.

We have a day school, singing school, sunday school and public worship on the Sabbath. We have the mail once a week. Lester Rounds is Post Master at this place.

Our place of shipment will be on Fox River, 6 miles north. This river communicates with Lake Michigan via Lake Winnebago and Green Bay, a portage of 5 miles is the only obstruction to navigation.

There is a Steam Boat on Lake Winnebago, which runs up Fox and Wolf Rivers and is of great service to the country.— Goods are proposed to be brought from Green Bay to any place on our navigable waters at 4 shillings per hundred. Gen. Hamilton Stevens of Green Bay will act as the general agent of all emigrants bound to this country.

There is an abundance of Government land still to be had at the rate of \$1,25 per acre, which is fast being taken up by actual settlers. Mr. Stevens' untiring zeal, and intimate knowledge of the country, will doubtless be of service to such as may seek information. This place is distant from Green Bay 100 miles, Sheboygan 68 miles (bad road) Milwaukee 110 via Watertown via Fon du Lac 80 miles (bad road)

Terms of admission into the Phalanx Association, are, good character, temperate habits, peaceable disposition, good health, industrious habits, and at least \$100 for each member of a family.

We are desirous of obtaining the following mechanics, viz: a Millwright, a Tin and Copper Smith, a Baker, Stone and Brick Masons, a Brick Maker, a Tailor, Carpenters and Joiners, etc. etc. Our country is one grand prairie, interspersed with beautiful groves, and scattering timber. Excellent springs and valuable rivulets well stored with fish weighing from 3 to 5 lbs. each. Deer, Ducks and Prairie Hens constitute the valuable game of our country.

Hay is cut in any quantity, and is of so good a quality that little attention is paid to the culture of tame grass.

The old red sand stone, and mountain lime rock, out crop in the ravines, and frequently on the Prairies, and are abundant for all agricultural purposes. Boulders of Granite, Sinite, Serpentine, and the like are frequently met with, but not in sufficient abundance to incommode the culture of the land.

The country is elevated and airy, free from stagnant waters, consequently from the bilious and intermittent fevers, which have proved so destructive to health and life in sections farther south.

Our prairies are already green with the spring grass, and already begin to teem with flowers, which will soon make

the waste of winter, assume the grandeur
of beauty, where the gardener's skill will
be outdone, the tulip and dahlia outrivaled,
and the grandeur of art be lost in the
sublimity of nature.

L. M. PARSONS, Pres't.
