

CS 399/490 – Internship/Practicum in Computer Science Fall 2018

Coordinator: David Furcy
Email: furcyd@uwosh.edu
Office: Halsey 221
Office Hours: MWF 10:10-11:10
TR 9:30-11:00
By appointment

Credits: This is a 3-credit course.

Course Website: D2L

Note: If you have special needs, please come and talk to me as soon as you can.

Course Information

Now that you are officially registered for either the Practicum or Internship (P/I) courses, you need to be aware of everyone's responsibilities for this course.

Your responsibilities include:

1. Writing a comprehensive self-reflective report that will ask you to relate your internship/practicum experience to our program outcomes. See http://www.uwosh.edu/computer_science/current-students/major-minor/objectives-learning-outcomes
Guidelines for this report are posted on D2L. The due date and time for this report are **Monday, January 21, 2019 at 9:00AM.**
2. Delivering an oral presentation towards the end of the semester, including mandatory attendance for each and every oral presentation of your fellow P/I students. Guidelines for this presentation are posted on D2L.
3. Filling out an exit survey before **9:00AM on Monday, December 10, 2018.**

As the P/I coordinator, my main responsibility is to grade items 1 and 2 (item 3 is required but NOT graded). Once registration is complete, I will send out a detailed schedule.

Your P/I supervisor is required to grade your work as well. Consequently be sure to let them know right away that they will be required, no later than **Monday, January 21, 2019**, to complete the evaluation form at

http://www.uwosh.edu/computer_science/current-students/internships-practicums/assessment-of-student-work-in-internship-practicum

The P/I supervisor's evaluation will count for 50% of your grade, the self-reflective report for 25%, and the oral presentation for 25%. The exit survey must be filled out for you to pass the course, but it is not factored into your grade.

Since I will not be in regular contact with your supervisor, it is your responsibility to communicate to him/her all relevant information, including regulations, expectations, responsibilities, etc., pertaining to the P/I course throughout the semester.

If you have any questions regarding the P/I course and cannot find the answer on the course web site, you should contact me.

Course Outcomes

For CS399/Internship: The student will:

1. Collaborate with their mentor at the interning site, formulate a job description for a software development project(s) that can be reasonably completed and evaluated in a 150- to 200-hour work experience.
2. Implement the project as described in 1.
3. Communicate with their mentor at the interning site on a regular basis to discuss progress on the project and, if necessary, obtain guidance on problems that have arisen.
4. Describe progress made on the project in a final report/essay that is submitted to the faculty internship/practicum coordinator. Since the faculty coordinator may not be expert in the particular of the internship project, this report must present the student's progress in the context of a coherent description of the problem being solved and the methodologies used to solve it.
5. Orally explain the particulars of the project in a presentation given to faculty and other computer science students.
6. Identify strategies for succeeding in the local, national, and global computing workforce.

For CS490/Practicum: The student will:

1. Work with an expert mentor/adviser, formulate a proposal for a small-scale research experience in computer science that can be reasonably completed and evaluated in a 150- to 200-hour work experience.
2. Implement the research project as described in 1.
3. Communicate with the project mentor/adviser on a regular basis to discuss progress on the project and, if necessary, obtain guidance on problems that have arisen.
4. Describe progress made on the project in a final report/essay that is submitted to the faculty practicum coordinator. Since the faculty coordinator may not be expert in the particulars of the research project, this report must present the student's progress in the context of a coherent description of the problem being solved and the methodologies used to solve it.
5. Orally explain the particulars of the project in a presentation given to faculty and other computer science students.
6. Identify strategies for succeeding in the local, national, and global computing workforce.
